

Caching

Thursday, August 18, 2022 8:52 PM

We can cache the HTML for each post to improve performance.

```
1 <?php
2
3 use Illuminate\Support\Facades\Route;
4
5 /*
6 |-----
7 | Web Routes
8 |-----
9 |
10 | Here is where you can register web routes for your application. These
11 | routes are loaded by the RouteServiceProvider within a group which
12 | contains the "web" middleware group. Now create something great!
13 |
14 */
15
16 Route::get('/', function () {
17     return view('posts');
18 });
19
20 Route::get('posts/{post}', function($slug){
21
22
23     if (!file_exists($path = __DIR__ . "../resources/posts/{ $slug }.html")) {
24         return redirect('/');
25     }
26
27     $post= cache()->remember("posts.{ $slug }",1200, fn()->file_get_contents($path));
28     return file_get_contents($path);
29     return view('post', [ 'post' => $post]);
30 }-> where('post','[A-z_\-]+');
```
