

INCLUDING CSS AND JS

Sunday, August 14, 2022 10:46 AM

We can include css and js to the welcome.html structure by creating it in the 'public' directory and linking them using link:css and script:src.

The screenshot shows the Visual Studio Code interface. On the left, the Explorer sidebar displays the project structure. The 'public' directory is expanded, showing files like .htaccess, app.css, app.js, faviconico, index.php, robots.txt, and resources. The 'resources' directory is also expanded, showing 'css' and 'js' subdirectories. The 'welcome.blade.php' file is selected in the Explorer. The main editor area shows the content of 'welcome.blade.php'. The code is an HTML template with a head section containing meta tags and a body section with a h1 tag. The CSS and JS files are linked in the head section using the following code:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta http-equiv="X-UA-Compatible" content="IE=edge">
6   <meta name="viewport" content="width=device-width, initial-scale=1.0">
7   <title>My Blog</title>
8   <link rel="stylesheet" href="app.css">
9   <script src="app.js"></script>
10 </head>
11 <body>
12   <h1>HELLO WORLD!</h1>
13 </body>
14
15 </html>
```
